

PROPOSED CLAIM AMENDMENTS
Ser. No. 10/730,013

Claim 1 (currently amended): A solid oxide fuel cell comprising at least one first single cell having an electrolyte, a fuel electrode, and an air electrode;

wherein the fuel cell is provided with a substrate that supports the first single cell;

the electrolyte is disposed on a first surface of the substrate, and the fuel electrode and the air electrode are disposed on the first surface of the substrate so as to sandwich the electrolyte in a side-by-side configuration on the first surface of the substrate;

one side ~~the edges of the electrolyte and the electrodes are in contact~~ contacts one side of the fuel electrode and the other side of the electrolyte contacts one side of the air electrode.

Claim 7 (currently amended): A solid oxide fuel cell comprising at least one first single cell having an electrolyte, a fuel electrode, and an air electrode;

wherein the fuel cell is provided with a substrate that supports the first single cell;

the electrolyte is disposed on a first surface of the substrate, and one of the fuel electrode and the air electrode is disposed on the electrolyte, and

the other of the fuel electrode and the air electrode is not in contact with the electrode disposed on the electrolyte and has at least one portion that is disposed on said first surface of the substrate and is in contact with the electrolyte; and

~~the side edges of the electrolyte~~ contacts the ~~and other of the fuel electrode in a side-by-side configuration~~ on the first surface of the substrate and the air electrode are in contact.
